

EcoShop Capstone - Quick Start Guide

Get EcoShop running in 5 minutes!

Prerequisites

- Web browser (Chrome, Firefox, Safari, or Edge)
 - Code editor (VS Code, Sublime Text, etc.) - optional
 - Git (for version control) - optional
 - Python 3 or Node.js (for local server)
-

Start Immediately

Option 1: Quick Run (Python)

```
# Navigate to project directory
cd ecoshop-capstone

# Start Python server
python -m http.server 8000

# Open in browser
```

```
# Visit: http://localhost:8000/capstone-  
index.html
```

Option 2: Using Node.js

```
# If you have Node installed  
npx http-server  
  
# Will show URL like: http://127.0.0.1:8080  
# Open in browser
```

Option 3: Direct Browser (No Server)

1. Download all files
 2. Open `capstone-index.html` in browser
 3. Should work! (Some browsers may restrict localStorage)
-

First Steps

1. Login

- Username: `admin` (or anything you want)
- Password: `demo` (or anything you want)
- Click "Login"

2. Explore Products

- Scroll through demo products
- Notice stock status indicators
- See responsive grid layout

3. Add New Product

- Click "+ Add Product"
- Fill in details:
 - Name: My Eco Product
 - Description: Sustainable and awesome
 - Price: 24.99
 - Stock: 100
 - Emoji: 🌱
- Click "Save Product"

4. Shopping

- Click "Add to Cart" on any product
- Notice cart badge updates
- Click "Cart" to view items
- Adjust quantities with +/- buttons

5. Checkout

- Click "Checkout" button
 - Order is created!
 - Click "Orders" to see history
-

Project Files

```
capstone-index.html      # Main application
(open this in browser)
capstone-app.js          # Application logic
(UI controller)
storage.js               # Data persistence
layer
store.js                 # Business logic
(CRUD operations)

Documentation:
CAPSTONE_README.md      # Complete project
documentation
CAPSTONE_ARCHITECTURE.md # System design
details
CAPSTONE_DEPLOYMENT_GUIDE.md # How to
deploy live
CAPSTONE_TESTING_GUIDE.md # Testing
procedures

Configuration:
package.json             # Project metadata
.gitignore               # Git configuration
QUICK_START.md           # This file
```

Key Features at a Glance

Feature	Status
Login/Logout	✓ Ready
Add Products	✓ Ready
Edit Products	✓ Ready
Delete Products	✓ Ready
Shopping Cart	✓ Ready
Checkout & Orders	✓ Ready
Responsive Design	✓ Ready
Data Persistence	✓ Ready
Modern UI	✓ Ready

Quick Test Checklist

After opening the app:

- ☐ Login works
- ☐ Products display
- ☐ Can add product
- ☐ Can edit product
- ☐ Can delete product

- ☐ Can add to cart
 - ☐ Cart badge updates
 - ☐ Can increase/decrease quantity
 - ☐ Totals calculate correctly
 - ☐ Can checkout
 - ☐ Order appears in orders
 - ☐ Responsive on mobile (if testing)
-

Testing on Mobile

Using Browser DevTools

1. Open DevTools (F12)
2. Click device toggle ( icon)
3. Select device (iPhone, iPad, etc.)
4. Test all features

Using Actual Device

1. Start local server
 2. Find your computer's IP: `ipconfig` (Windows) or `ifconfig` (Mac/Linux)
 3. On mobile, visit:
`http://[YOUR_IP]:8000/capstone-index.html`
 4. Test all features
-

Troubleshooting

Issue: Blank page or error

Solution:

1. Check browser console (F12)
2. Verify file paths are correct
3. Try clearing cache (Ctrl+Shift+Del)
4. Restart server
5. Try different browser

Issue: localStorage not working

Solution:

1. This should work in all modern browsers
2. If testing file:// URL, may not work
3. Always use local server (python/node)
4. Check browser privacy settings

Issue: Styles not loading

Solution:

1. All styles are inline in HTML
2. Check browser DevTools → Elements
3. Verify CSS is present in file
4. Clear cache (Ctrl+Shift+R)

Issue: Forms not submitting

Solution:

1. Check browser console for errors
 2. Ensure JavaScript is enabled
 3. Try different browser
 4. Check localStorage quota
-

Quick Tips

Keyboard Shortcuts

- `F12` - Open DevTools
- `Tab` - Navigate between form fields
- `Enter` - Submit forms
- `Esc` - Close modals
- `Ctrl+Shift+R` - Hard refresh (clear cache)

Console Commands (Advanced)

```
// View all products
store.getProducts()

// View cart
store.cart

// View orders
store.getOrders()
```

```
// Clear all data
storage.clear()

// Export data
store.export()
```

Learn More

- **Full Features:** See `CAPSTONE_README.md`
- **System Design:** See `CAPSTONE_ARCHITECTURE.md`
- **Testing Guide:** See `CAPSTONE_TESTING_GUIDE.md`
- **Deployment:** See `CAPSTONE_DEPLOYMENT_GUIDE.md`

Deploy to Production

Ready to go live? Choose one:

Vercel (Recommended)

1. Push to GitHub
2. Import project in Vercel
3. Deploy (automatic!)
4. Get live URL instantly

Netlify

1. Push to GitHub or drag folder
2. Netlify auto-deploys
3. Get live URL instantly

Cloudflare Pages

1. Use Wrangler CLI or GitHub integration
2. Auto-deploys on push
3. Get live URL instantly

See `CAPSTONE_DEPLOYMENT_GUIDE.md` for detailed instructions

Need Help?

1. Check Documentation

- README for features overview
- ARCHITECTURE for technical details
- TESTING_GUIDE for testing procedures

2. Check Console

- Open DevTools (F12)
- Look for error messages
- Check localStorage in Application tab

3. Try a Test

- Login again
- Refresh page
- Clear cache
- Try different browser

4. Review Code

- Open capstone-index.html
 - Read JavaScript comments
 - Follow the code flow
-

Learning Goals

By using this capstone, you've learned:

- ✓ Responsive HTML/CSS design
 - ✓ JavaScript DOM manipulation
 - ✓ Object-oriented programming (classes)
 - ✓ Data persistence (localStorage)
 - ✓ CRUD operations
 - ✓ Error handling
 - ✓ User authentication simulation
 - ✓ Shopping cart implementation
 - ✓ Order management
 - ✓ Deployment to production
-

You're Ready!

Congratulations! You have a complete, production-ready web application.

Next Steps:

1. Explore the code
2. Modify and experiment
3. Deploy to production
4. Share with others!

Happy coding! 🚀

For questions, see the full documentation or review the code comments.
